

MyPrivacy

SOFTWARE FOR THE LOCAL PROTECTION OF DATA

'MyPrivacy' is a software that automatically creates on your computer a personal folder protected by a cryptographic process. This means that any document you want to save within this folder will be automatically coded and, thanks to the USB token, only who is in possession of the key and the password/pin will be able to decipher and read it.

Sensitive documents, projects and personal work will be safe at last!

The double level of authentication protection (*Strong Authentication*) consists in a physical object possessed by the user and in a reserved password.

The ciphering and deciphering of files happen in a quick and immediate way thanks to a simple click of your mouse.

PRACTICAL ASPECTS

- Double level of authentication protection: hardware key and access password.
- Automatic ciphering of the saved documents.
- Automatic deciphering of the documents from the folder.
- Safe deletion of temporary files.

CONTENTS

- Hardware key
- CD with software
- Handbook
- Guarantee

REQUIREMENTS

HW: Pentium II or superior, 64Mb Ram, 1.1Usb Gate or superior

SW: Windows 98SE, Me, 2000, XP
